

## CT Chest

Procedure: This is unique

Clinical information:

Comparison: None.

### Findings

Category	Finding
Lungs and large airways	Normal.
Pleura	Normal. No pleural effusion or thickening.
Heart and pericardium	Heart size is normal. No pericardial effusion.
Mediastinum and hila	Normal.
Chest wall and lower neck	Normal.
Vessels	Atherosclerotic changes in the aorta and coronary arteries.
Bones	Normal.

Impression: Cavitary lesion in the left upper lobe. Differential diagnosis infectious and neoplastic disease. Bandlike areas of atelectasis/scarring and bronchiectasis in the right upper lobe likely related to prior infection/insult.
