

## CT Onco Renal Mass

Procedure:

Clinical information:

Comparison: None.

Renal mass

| Category                    | Finding |
|-----------------------------|---------|
| Size:                       |         |
| Location:                   |         |
| Enhancement:                |         |
| Internal consistency:       |         |
| Central calcification:      |         |
| Peripheral calcification:   |         |
| Fat density:                |         |
| Septations:                 | None.   |
| Peripheral wall nodularity: |         |
| Local extension:            | None.   |
| Collecting system:          |         |
| Perinephric space:          |         |
| Gerota fascia:              |         |
| Pararenal space:            |         |

Other findings

| Category              | Finding |
|-----------------------|---------|
| Adrenals:             |         |
| Liver:                |         |
| Spleen:               |         |
| Vascular involvement: | None.   |
| Adjacent nodes:       |         |
| Distant metastases:   |         |
