

CT Chest

CT Chest

Category	Finding
Procedure	
Oral contrast	Oral contrast was administered.
IV contrast:	

Clinical information:

Comparison: None.

Findings

Category	Finding
Lungs and large airways:	Normal.
Pleura:	Normal. No pleural effusion or thickening.
Heart and pericardium:	Heart size is normal. No pericardial effusion.
Mediastinum and hila:	Normal.
Chest wall and lower neck:	Normal.
Vessels:	Atherosclerotic changes in the aorta and coronary arteries.
Bones:	Normal.

Impression: Cavitory lesion in the left upper lobe. Differential diagnosis infectious and neoplastic disease. Bandlike areas of atelectasis/scarring and bronchiectasis in the right upper lobe likely related to prior infection/insult.
